Important notice

- 1 Breastfeeding is best. Infant milk is suitable from birth, when infants are not breastfed and should only be used on the advice of a doctor, dietitian, pharmacist, or other professional responsible for maternal and child care. When bottle feeding do not allow prolonged or frequent contact of milk feeds with babies' teeth as this increases the risk of tooth decay. It is important babies' teeth are cleaned after the last feed at night.

Nutricia offers access to a wide range of support services and resources including:

- Our free Sampling Service to order product samples and have them sent to your patients' homes.
- A range of CPD accredited e-learning programmes.
- Order free paper copies of our support tools for yourself or to use with your patients.
- Sign up to receiving marketing communications and be the first to know about our free educational events & webinars, the latest scientific research and product updates.
