We recently started using Bubs Organic Milk Infant Formula and have honestly had such a positive experience so far. I love that it's made with organic grass-fed milk and feels like a gentler option for little tummies. It mixes really well, doesn't have a strong smell, and my baby has been settling and feeding comfortably with it. As a parent, it gives me peace of mind knowing the ingredients are thoughtfully chosen and Australian made. Definitely impressed with our first experience using Bubs

This formula is easy to use. My baby did not have any issues or problems. Seemed to enjoy it. I would consider buying again and would recommend. It gave me peace of mind that I was providing my baby with a nourishing formula. Seems to have good quality ingredients perfect for growing babies.

The Bubs formula feels like a premium quality product. I also appreciate that it's made with organic grass-fed milk and thoughtfully selected ingredients. Most importantly, it seemed gentle on my baby's tummy and kept them satisfied after feeds.

My baby loves bubs formula! We do a mix of breastfeeding and bottle feeding and she goes back and forth easily and has no issues with the formula. Easy to prepare with simple instructions. Will definitely keep using.

Honestly, it's been great. She took to it straight away no issues with it, and it mixes really well without any clumps. I like that it's made from organic, grass-fed cow's milk and has all the extras like DHA and probiotics, so I feel good but the only downside is it's a bit on the pricey side, but for me, it's worth it knowing it's clean and gentle on her, I'm okay about it.

Very happy — Bubs has been an awesome product for my bubby - no upset tummy or fussiness and instead she loves it and is growing up to be healthy girl ❤️ it has a higher iron content than other formulas which was important for us because she was preemie and I was unable to breastfeed. Bubs helped me to feel confident that we were doing the best that we could

Switched from Goat to Cow Effortlessly — My son has been formula fed since basically day one. Cows milk at first was no good due to some gastrointestinal issues and the Bubs Goat Milk came to the rescue. By 10 months I was noticing he was handling dairy foods well so I switched nervously to this one — but I didn't need to worry. The 50/50 whey casein was just right for transitioning slowly to a new protein. The formula smells good, is easy to mix and isn't foamy. DHA is plant based not fish for that smell (if you know you know!!) We are now transitioning to the toddler milk as I want to keep giving him a boost of vitamins, omegas and minerals for a bit longer as he's a fuss pot with foods and meat in particular. After 8 months breastmilk is... Read more

High quality infant formula — I live in Japan and pretty much all formula here is soy-based. A friend recommended Bubs Organic and we have been very happy with it, it looks and smells more "natural" and our young son drinks it eagerly.

Great nutritional product. — We had a great experience switching from normal dairy milk to Bubs Toddler for our 24month old. He was having constipation issues when he would drink a bottle of cows dairy milk each night, sometimes asking for more. After switching, we noticed our son wouldn't finish a whole bottle, and fall asleep contentedly. Usually we would have thought that's a negative reaction but actually it proved to us the nutritional value of the toddler milk was much higher than a bottle of regular cows milk. With no further constipation problems we've decided to stick with Bub's toddler milk for bed time.
